

## **ESCAPE TO PARADISE PROJECT**

**PROJECT Parallax Website** A parallax website includes fixed images in the background that you can keep in place and you can scroll down the page to see different parts of the image. With basic knowledge of HTML and CSS, you can give a parallax effect to a website. Using the parallax effect in web designing is really popular and it gives beautiful look and feels to the webpage. Give it a try and divide the whole page into three to four different sections. Set 3-4 background images, align the text for different sections, set margin and padding, add background-position and other CSS elements and properties to create a parallax effect. You can take help from Parallax Website.

### **PROJECT PROMPT**

Project: "Escape to Paradise"

Create a parallax webpage that transports visitors to a serene and idyllic tropical island.

Objective:

Design a visually stunning parallax webpage that showcases the beauty of a tropical island. Use images, text, and other elements to create an immersive experience that makes visitors feel like they're escaping to paradise.

### **Requirements:**

1. Background images: Use high-quality images of a tropical island, such as palm trees, crystal-clear waters, and white sandy beaches.
2. Parallax effect: Implement a parallax effect that makes the background images move at a slower rate than the foreground elements.
3. Foreground elements: Include text, icons, or other graphics that highlight the island's features, such as "Snorkeling", "Relaxation", or "Wildlife".
4. Color scheme: Choose a color scheme that reflects the island's tropical atmosphere, such as blues, greens, and sandy neutrals.
5. Interactivity: Add interactive elements, such as scrolling animations or hover effects, to enhance the user experience.
6. Responsive design: Ensure that the webpage is responsive and works well on different devices and screen sizes.
